

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for testing the compatibility of software modules, the method comprising [[the]] computer implemented steps of:

responsive to receiving a request to install a new software module in a data processing system, performing an inventory on an existing set of software modules resident in the data processing system;

referring to a knowledge base of software modules to determine whether the new software module is known to function compatibly with each software module in the existing set of software modules;

responsive to a determination that the new software module is not known to function compatibly with each software module in the existing set of software modules, determining whether to test the new software module in a test data processing system in combination with the existing set of software modules; referring to the knowledge base of software modules to determine whether the new software module is known to function incompatibly with the existing set of software modules; and

~~responsive to a determination that the new software module is not known to function incompatibly with the existing set of software modules, testing the new software module in a test data processing system in combination with the existing set of software modules;~~

responsive to a determination to test the new software module in the test data processing system in combination with the existing set of software modules, identifying an operating environment of the data processing system;

installing the new software module, the identified environment, and the existing set of software modules on the test data processing system;

testing the new software module in combination with the existing set of software modules on the test data processing system;

responsive to a test result indicating that the new software module is compatible with the existing set of software modules, adding a new combination indicating the compatibility to the knowledge base; and

installing the new software module in the data processing system.

2. (Currently amended) The method of claim 1, wherein determining whether to test testing the new software module in a test data processing system in combination with the existing set of software modules comprises:

prompting a user for a [[first]] selected input, [::]
responsive to a first selected user input, testing the new software module in a test data processing system in combination with the existing set of software modules; and
responsive to a second selected user input, installing the new software module in the data processing system;

3. (Currently Amended) The method of claim [[1]] 2, further comprising:

receiving a first selected input from the user that indicates installing the new software module in the data processing system.
responsive to a determination that the new software module is known to function incompatibly with the existing set of software modules, prompting a user for a first input;
responsive to a first selected user input, testing the new software module in a test data processing system in combination with the existing set of software modules; and
responsive to a second selected user input, installing the new software module in the data processing system;

4. (Currently Amended) The method of claim 1, further comprising:

responsive to a determination that the new software module is not compatible with each software module in the existing set of software modules, adding a new combination indicating the incompatibility to the knowledge base;
notifying the user that the new software module is not compatible with the existing set of software modules; and
prompting the user for an input.
responsive to a test result indicating that the new software module is compatible with the existing software modules, adding a new combination indicating the compatibility to the knowledge base; and
installing the new software module in the data processing system.

5. (Currently Amended) The method of claim 1, further comprising:

responsive to a determination that the new software module is not compatible with each module in the existing set of software modules, adding a new combination indicating the incompatibility to the

knowledge base and searching the knowledge base to find a closest match, wherein at least one of the existing modules is removed or replaced with a different version;

prompting for the user as to availability of the closest match combination; and

responsive to a user input, installing the new software module and changing the existing set of modules as needed to obtain a compatible combination.

6. (Cancelled)

7. (Currently Amended) The method of claim [[1]] 4, wherein the input indicates one of installing the new software module in the data processing system and not installing the new software module in the data processing system, wherein ~~testing the new software module in a test data processing system in combination with the existing set of software modules comprises:~~

~~identifying an environment of a client in which the software module is to be installed;~~

~~recreating the environment on a test data processing system; and~~

~~installing the software module on the test data processing system to form the installed software module.~~

8.-19. (Cancelled)
